Melanoma ABCD's

Doctors urge people of all ages to follow these warning signs of melanoma:

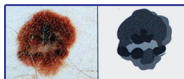

A-Asymmetry:

one half does not match the other half.

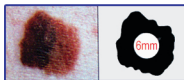

B-Irregular Border:

Edges are ragged, notched or blurred.

C-Color: No uniform

color; from tan through red to blue.

D-Diameter: 6 mm

Size matters, see guide below.

Melanoma can be smaller than 6mm; any changes in size, color, shape or texture of a mole, new mole, itching or bleeding, change in skin? See a dermatologist immediately.

Scale is approximate. In doubt, see your doctor
