Time To Get Wise

...about the 'Dirty Dozen' Chemicals

The enemy of skin health are chemicals present in everyday skin care and household products.

This 'Dirty Dozen' was developed in Marin County California because they had the highest cancer rates in the US. These chemicals are found in over 85%+ of all skin and pet care products and are believed to contribute to many skin disorders and elevated cancer rates among

people and pets. At Keys, we believe that over 50% of skin disorders are caused by one or more of these chemicals. We support the advocacy who seek to have them banned. Keys products contain none of these or any other man-made chemicals.

Chemical: **Sodium/Ammonium Lauryl Sulfate (SLS)**

Present in: Shampoo, conditioner, whiteners, laundry detergents and carpet cleaner

Health Concern: Alters skin structure, allowing other chemicals to penetrate deep into the skin

Chemical: **Parabens**

Present in: Shampoos, conditioners, whiteners, lotions, insect repellents-most skin care products

Health Concern: May cause skin irritation, rash or dermatitis or allergic skin reactions

Chemical: **Propylene Glycol**

Present in: Shampoos, conditioners, whiteners, lotions, insect repellents and most liquid skin/hair care products

Health Concern: Alters skin structure, skin irritant, allergic reactions

Chemical: **Phthalates**

Present in: Fragrance, hair spray, hair gel, lotions

Health Concern: Damage the liver, kidneys, lungs

Chemical: **Petrolatum**

Present in: Creams, lotions, ointments

Health Concern: Allergic reactions

Chemical: **Cocamide DEA/Lauramide DEA**

Present in: Shampoo, Body Wash, Cleansers, Bath Oils, Liquid Soap, Bar Soap, Moisturizer

Health Concern: May form carcinogenic nitrosamines
